

# Building Your Memory Analysis Toolkit

**Richard Warburton** 

@richardwarburto www.monotonic.co.uk

Inspecting the VM

**Heap Dumps** 

**Memory Profiling** 

## How to Inspect the JVM

#### Demo

jps

Ships with the JVM

**Can list running JVMs** 

**Commandline Tool** 

#### Demo

JvisualVM

Ships with the JVM

Very versatile tool

GUI

# Object Histogram

A listing of how much memory is used by different types of objects

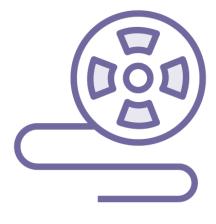

### Object Histograms

Snapshot What is in the heap currently

Quick Very fast to collect

Low Detail Doesn't list cause or objectrelationships

jmap -histo:[live,] <pid>

Seeing an Object Histogram

## Heap Dumps

# Heap Dump

A copy of all live objects in the application's heap

#### What is a Heap Dump?

Snapshot What is in the heap currently

Slow & Large
Requiresspaceto
store and time to take
thedump

HighDetail
Object relationships
andperobject
memory

jmap -dump:[live,] file=/path/to/dump <pid>

Recording a Heap Dump Also possible using JVisualVM

- -XX:+HeapDumpOnOutOfMemoryError
- -XX:HeapDumpPath=/path/to/dump

### Heap Dump on Out of Memory

Performs a heap dump when you run out of memory (or spends too long performing GC)

Can be useful, but care is needed

#### Eclipse Mat

### Free Heap Dump Analyzer

http://eclipse.org/mat

#### Other Tools Usable

JVisualVM, jhat

## Memory Profiling

### Memory Profiling

**Event Driven** 

See patterns of activity

Records memory allocations and related information

#### Memory Profilers

#### **JVisualVM**

Free, Open Source Tool
Ships with JDK
Includes a Memory Profiler
Can disable escape analysis

#### **Java Mission Control**

Free for use in Development
Ships with Java 8+
Includes a Memory Profiler
More accurate

#### Summary

#### Learned about memory tooling

- Memory Profiling with JVisual VM and Mission Control
- Heap Dumps with MAT
- jmap
- jps

Time to solve some problems!
